

μPlaits SE

μPlaits SE is a voltage-controlled sound source offering direct access to a large palette of easily tweakable raw sonic material generated by models spanning a wide range of synthesis techniques.

This re-engineered Eurorack module miniaturizes and redesigns the original **Mutable Instruments Plaits**, reducing its size from 12HP to 8HP and rearranging its front panel layout.

Fully compatible with upstream Plaits firmware. Includes power cable, mounting hardware, and a one-year warranty. Designed and built with care by **Tall Dog Electronics** in Western Massachusetts. Licensed **CC BY-SA 4.0** open source hardware.

Part number	Panel style	Panel material
TD-UPSE-B/B	Matte black, gold markings	Copper clad laminate
TD-UPSE-B/S	Satin silver, black markings	Anodized aluminum

Height	3U (128.5 mm)
Width	8HP (40.3 mm)
Depth	43 mm (with power)
+12V	50 mA (average)
-12V	5 mA (average)
