

μo_C SE is a multi-purpose module in which a generic set of inputs and outputs are remapped on-the-fly through the use of a number of different built-in apps.

This re-engineered Eurorack module updates and simplifies the classic **Ornament & Crime** (aka o_C) design by miniaturizing the module from 14HP to 8HP and redesigning the front panel layout without eliminating any functionality.

Fully compatible with upstream o_C firmware. Includes power cable, mounting hardware, and a one-year warranty. Designed and built with care by **Tall Dog Electronics** in Western Massachusetts. Licensed **CC BY-NC-SA 4.0** open source hardware.

Part number	Panel style	Panel material
TD-OCSE-B/B	Matte black, gold markings	Copper clad laminate
TD-OCSE-B/S	Satin silver, black markings	Anodized aluminum

Height	3U (128.5 mm)
Width	8HP (40.3 mm)
Depth	31 mm (with power)
+12V	85 mA (average)
-12V	10 mA (average)
